SKILLS

- JavaScript
- React
- Ruby
- Ruby on rails
- PostgreSQL
- LAN/WAN Technologies
- Systems mantainance
- Wireless communication
- Routing protocols
- Subnetting

PROJECTS

E-farming application
This application allows farmers to upload their fresh products from the farm. They sell their products directly to the consumers. Users login to the app and search for a product of their choice and they purchase it from the farmer directly.

Recipe application

This application helps users search for various recipes of a particular ingredient. For instance one has an ingredient but has no idea of a meal to prepare with the ingredient this is where the application provides you with various meals to be prepared with that ingredient.

Job searching application

This is an application that helps employers to browse through jobseekers profiles available in the database and find their best match. This will reduce time wastage in recruitment process since employers will just search a jobseeker who matches their needs and make an offer. The application also allows jobseekers to register their profiles.
